Representative FraudRecon Case

#train_fraud_02208 | Customer Service Impersonation

The victim, Mr. Li (male, 27), reported receiving a call from a fraudster posing as an e-commerce customer service representative. The caller claimed that a paid membership had been activated on his account and that he would be charged CNY 500 per month unless it was cancelled. He was then transferred to another fraudster posing as a banking representative. Under the pretext of membership cancellation and identity verification, the victim was instructed to activate mobile banking and make several transfers to designated accounts. After several initial transfers were immediately returned to gain his trust, he was induced to send three additional transfers totaling CNY 3,489, which were not refunded. (Note: Specific details are omitted here for brevity)

P1 Initial Contact

S: Hello, Mr. Li. This is customer service, employee ID 9527. I'm calling about your account membership. [Omitted] Our system shows that a paid membership was activated on your account, with an automatic fee of CNY 500 per month, or CNY 6,000 per year.

P3 Inducement

S: Mr. Li, I've checked your account. The membership is linked to your bank card, so we cannot cancel it directly. [Omitted] If you don't handle it today, the system may charge you tonight.
V: Tonight? Then... what should I do? Please tell me quickly.
S: Please contact our partner online banking platform. Only they can cancel the payment.

P4 Op. Guidance

S: I can transfer you to a specialist at our partner bank, who can guide you through the process.
V: Another call transfer? That's troublesome... Fine, go ahead.
[Call transferred to the partner bank]
S: To cancel the automatic payment, we first need to verify your identity and account.

P2 Trust Building

S: Good. Tap "Transfer" on the app's home screen and enter the verification account I provide.
V: Someone else's account? Is that safe?
S: Don't worry. It is only for identity verification, and the money will be returned immediately. If you're unsure, you can transfer just CNY 1 as a test—you'll see it returned right away.

⋮ ⋮

P5 Fund Transfer

S: Don't worry. This call is being recorded, so we would never deceive you. Let me know once the transfer is complete, and I'll submit the cancellation request.
V: Um... I'm transferring it now... Done—CNY 1,490. Can you confirm receipt?

P6 Sust. Pressure / Discovery

S: Mr. Li, there is still an issue with your account. The last verification failed. Please transfer a slightly larger amount so the system can refund all your money at once.
V: Then... I'll try. To the same account, right? [Transfer process omitted]
V: [Call disconnected] Hello? Hello? Why did you hang up?

Five Tasks in FraudRecon-Bench

T1 Fraud Detection

```
Input: Dialogue
Output: {
  "label": "scam",
  "confidence": 0.95
}
```

T2 Category Classification

```
Input: Dialogue
Output: {
  "category": "Customer Service
Impersonation"
}
```

T3 Phase Identification

```
Input: Dialogue segments
Output: {
  "phases": [
    {"seg": "s1-s8","phase":"initial_contact"},
    ...
    {"seg": "s84-s87", "phase": "discovery"} ]
}
```

T4 Signal Recognition

```
Input: Dialogue
Output: {
  "signals": [
    "impersonate_ecommerce_cs",
    "urgency_creation"
    ...]
}
```

T5 Evidence-Chain Reasoning

<think> First, the dialogue contains several key entities related to the scam, including a fake paid membership... Second, the conversation follows a clear fraud progression: the suspect first contacts the victim as platform support, then... Specific scam signals are grounded in the dialogue: in Phase 1, the suspect claims to be customer service staff, matching the signal... Taken together, these behaviors indicate a customer service impersonation scam: the suspect contacted the victim while posing as staff, used membership cancellation as a pretext, induced repeated transfers to personal accounts, built trust through a small refund, and continued pressuring the victim. </think>
